

# Company Profile

The company which projects into the future a tradition of thousands of years. On a surface of 100.000 sq. m. (24.70 acres), which is perfectly commingled into an ancient olive grove, is a plant which uses the latest technology in their production. The production (extra virgin olive oil, olive oil, refined pomace oil and seed oils such as: sunflower, corn, soy, peanut, grape, rape and palm) and packaging plant, for our own brand as well as for different brands, actually is one of the largest in the world with its 4 packaging lines in which the most powerful one has a production capacity of *11 pieces per second*

The facility can store to 60,000 M. Tons of Extra virgin Olive Oil in 100 stainless steel tanks and this oil can be stored for long periods of time due to a sophisticated inert system of nitrogen atmosphere.

All this means that the company can guarantee regular availability of products, a high and constant quality, readiness for deliveries and very *competitive prices*.

With the main office in Monopoli, located in the heart of **Puglia**, has the advantage of being in a strategic position from a geographic, point of view as well as one of production and economics. *Puglia is indeed the Italian Region which has the largest production of extra virgin olive oil with over 32% of the land covered by olive groves.* Moreover, Monopoli's harbor, specializing in exchanges of food stuffs-oil, is one of the most active and well equipped.

Being in such close proximity to the production markets of the raw materials thus minimal production costs and the possibility of a better quality control of the previous production phases.

**The experience and professionalism** of our technicians enables us to select the best parcels of Extra virgin olive oil, while developing and storing them in the best way possible until packaging

## *Production*

*By* installing the productive headquarters in Monopoli (BARI), a township located right in the center of the coastline of puglia, which is the major productive Region of Olive Oil, it has been successful in integrating the agriculture with a new and modern agricultural-foodstuffs industry and to give full value to the most valuable ingredient of the *mediterranean diet* : Olive Oil.

The Experience gained during these years and the natural predisposition to the new technologies and with a constant improvement of production methods has enabled the success

and the growth of the productivity capacity. Continuous investments in research and technologies have made it possible to fit the factory with modern machinery with a remarkable production power.

The Company has one warehouse available for storing the Oils which is fitted with over 100 in stainless steel tanks which have a capacity of about 60.000 M. Tons, here it is stored in an inerted atmosphere of nitrogen and its temperature is controlled to warrant the maximum hygiene and quality.

A company which projects into the future a tradition of thousands of years. On a surface of 100.000 sq. m. (24.70 acres), which is perfectly

commingled into an ancient olive grove, is a plant which uses the latest technology in their production. The production (extra virgin olive oil, olive oil, refined pomace oil and seed oils such as: sunflower, corn, soy, peanut, grape, rape and palm) and packaging plant, for our own brand as well as for different brands, actually is one of the largest in the world with its 4 packaging lines in which the most powerful one has a production capacity of *11 pieces per second*

*The* flower at the button-hole of the company is the symbol of Quality control in all phases of the productive cycle. Indeed its technicians follow closely the agricultural production on the cultivated fields as well in the olives groves and moreover a modern laboratory which analyze all oils to ascertain that they are in exact compliance with their requested specifications, and also assures that they are following the strict guidelines of the European and

International Communities. At this point is important to highlight that the company is certified with ISO 9002 Certificate, which is granted only to the Companies which are able to guarantee superior qualitative standards, not only on the product but also in all the production's stages.
